

Magnetic Vest

Strong enough to repel most objects(bullets)

Vest now are not good enough I believe they need an upgrade of some sort

This Vest uses magnetic technology to completely repel or make it even durable for the person to survive

The Vest I made are strong enough that bullets fired from a handgun or a rifle will completely repel it but a 50. BMG bullet would hit but it would be like a punch a hard punch but wouldn't knock you down.

This is really good for society because it protects important officials, soldiers, police officers, etc.

Of Course you would have to give important officials free ones but soliders and officers their department or their superior would have to pay quite a lot. Like 50k for ten vest.
